COVENANT

Every trip, every rupee, every partner. On your phone.

A daily log made for a tours & travels business run by partners. Record each trip in under a minute and always know whether the business is making money.

- Profit or loss on every trip, worked out for you
- Today, this month and all-time results at a glance
- Clear records of what each partner has put in
- Works on any phone, no app-store download

Product brochure

Working prototype · November 2026

All figures shown are sample data

01 Why Covenant

Trip money is easy to lose track of. Fuel is paid in cash, tolls on FASTag, parking from someone's pocket, and the fare comes in later. Covenant puts it all in one place, as it happens, so the partners can see the true result of the business at any time.

Know the result of every trip

Enter what the customer paid and what the trip cost. The profit or loss appears straight away, on a yellow plate for profit and a red one for a loss.

See the business at a glance

One tap switches between today, this month and all time. A daily chart shows good days, slow days and days that lost money.

Fair between partners

Capital and out-of-pocket expenses are recorded against each partner's name with the date and a description. Everyone sees the same numbers.

Made for the road

Large buttons, number keypads for amounts, today's date and the usual vehicle filled in already. Strong contrast so it reads well in sunlight.

Mistakes are easy to fix

Any trip or entry can be opened and corrected later. Deleting needs a second tap, so nothing disappears by accident.

Ready to grow

Every trip records its vehicle number, so a second or third vehicle fits in without any changes. Trips download as a spreadsheet for the accountant.

A day with Covenant

Morning	Open the app and see **this month's profit so far** before the first pickup.
After a trip	Tap **Log trip**. Type the places, the odometer reading, the fare and the fuel, toll and parking. Save. **Under a minute.**
Maintenance	A partner pays for an oil change. They add it under **Partners → Expenses paid** with the amount and what it was for.
Evening	Home shows **today's trips and today's profit**, after partner-paid expenses.
Month end	Review the month's chart, check each partner's contribution and **download the trips as a spreadsheet**.

02 What it records and how it adds up

Three kinds of records, and four simple calculations. There are no hidden formulas: every figure in the app can be traced back to the entries that made it.

Trips

- Date and vehicle
- From → to
- Odometer start and end, or just the km
- Fuel, toll, parking and other costs (driver bata, food…)
- Amount received
- Notes

Partner capital

- Which partner
- Date
- Amount
- Note
- Add more at any time; nothing needs to be equal between partners

Expenses paid by partners

- Which partner
- Date and amount
- Category: maintenance, repair, tyres, insurance, tax / permit, other
- Description of what was paid for

The calculations

Trip expenses	fuel + toll + parking + other
Trip profit	amount received − trip expenses
Net for a period	trip profit − expenses paid by partners in that period
Partner total	capital put in + expenses that partner paid

Worked example

Kochi Airport → Munnar, 112 km

Amount received	₹4,200
Fuel	− ₹1,450
Parking	− ₹60
Trip expenses	₹1,510

Trip profit

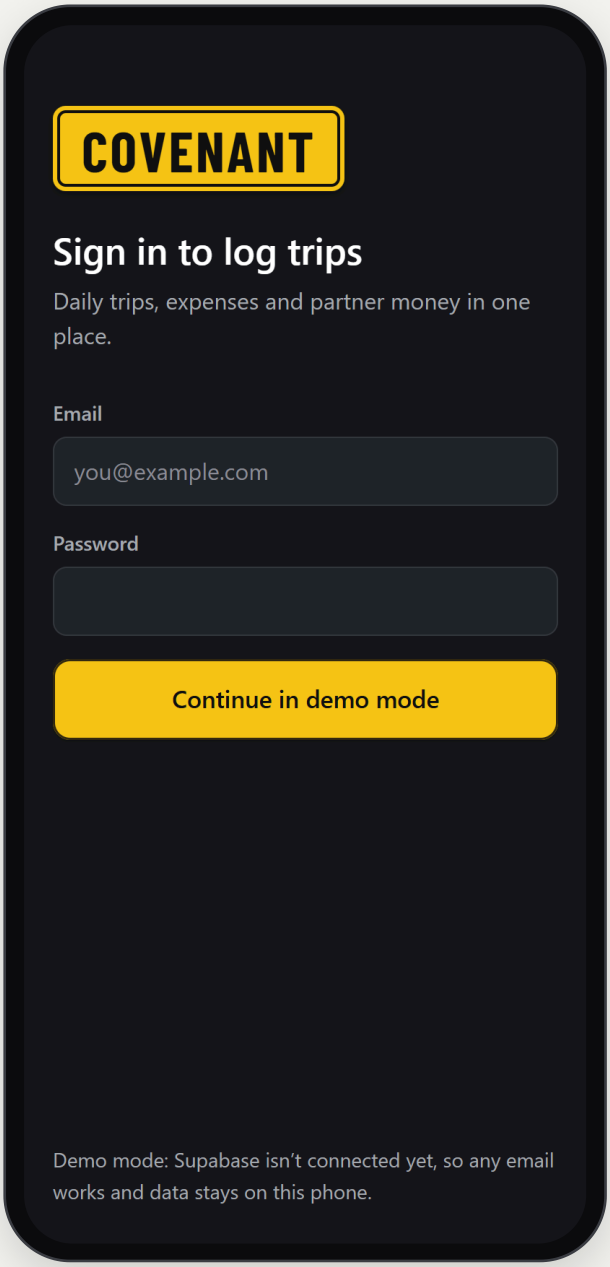

+₹2,690

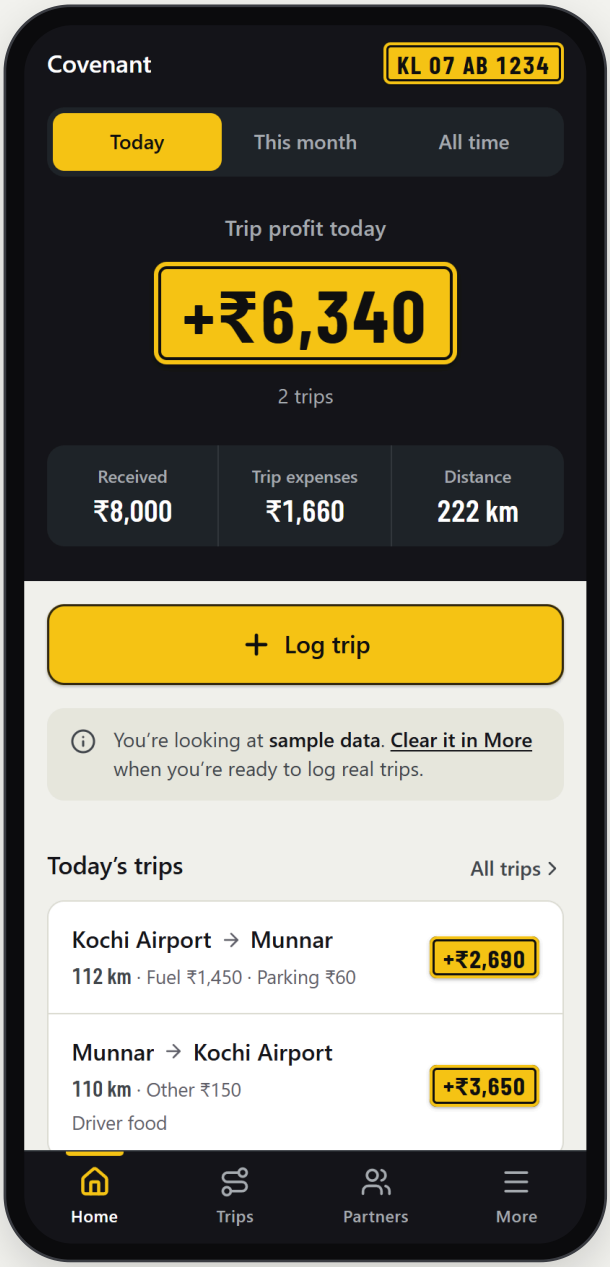

+₹2,690 Profit shows on a yellow plate

−₹300 A loss turns the plate red

03 Signing in and Home

Each partner signs in on their own phone. Home answers the first question of the day: how much did we make?

A Sign in

Each partner has their own email and password, and all three see the same figures.

- Business name shown as a number plate
- Stays signed in on the phone until signing out
- With the database connected, only the partners can get in

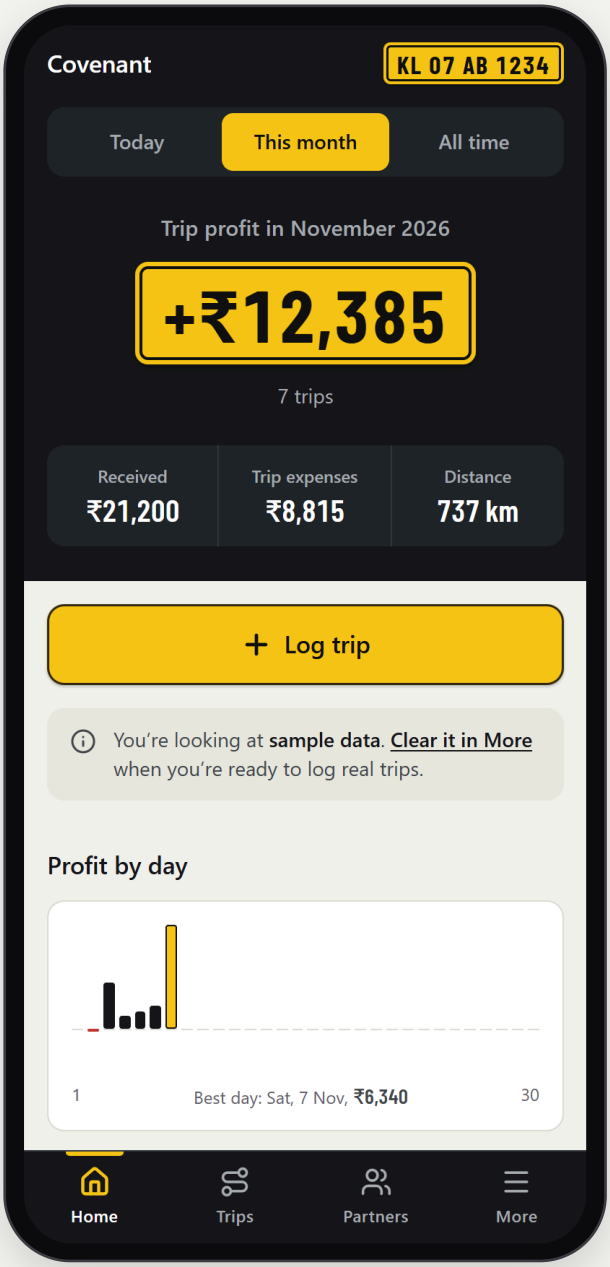

B Home: today

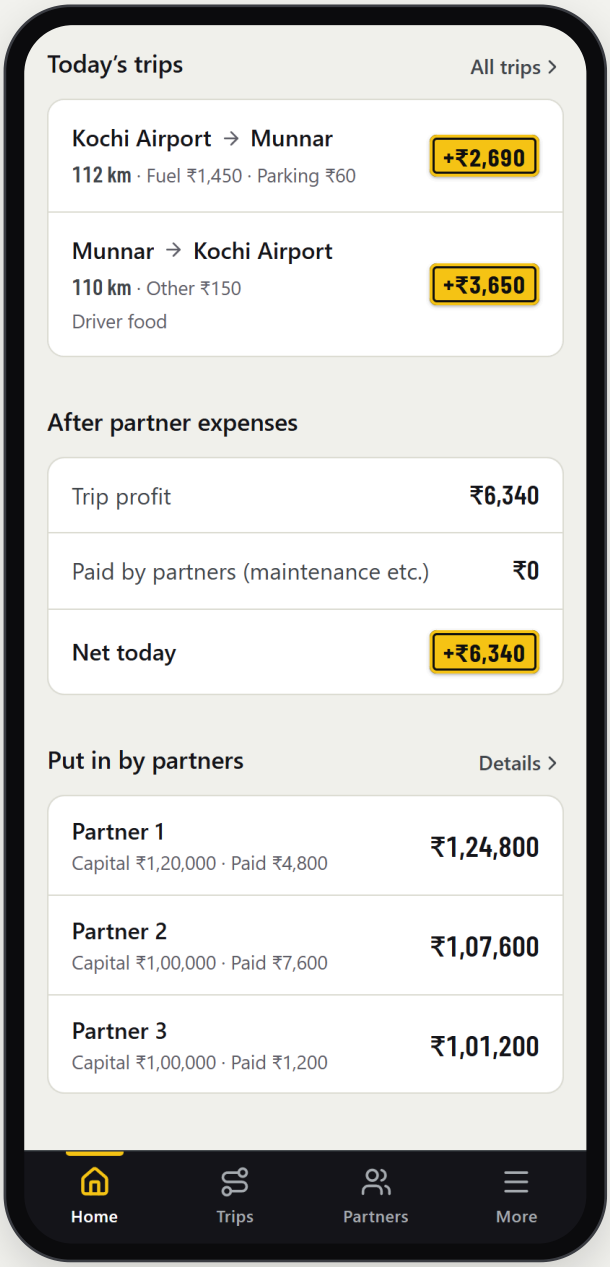

The big plate is today's trip profit. **Log trip** is always one tap away.

- Money received, trip expenses and distance
- The vehicle number in the top corner
- Today's trips, each with its own result

04 The dashboard

Switch between today, this month and all time. Further down, partner-paid expenses are taken off to show the real net result.

C This month

The month's profit and a bar for every day of the month.

- Loss days show in red, today's bar is yellow
- Best day of the month called out
- Number of trips, km, money in and out

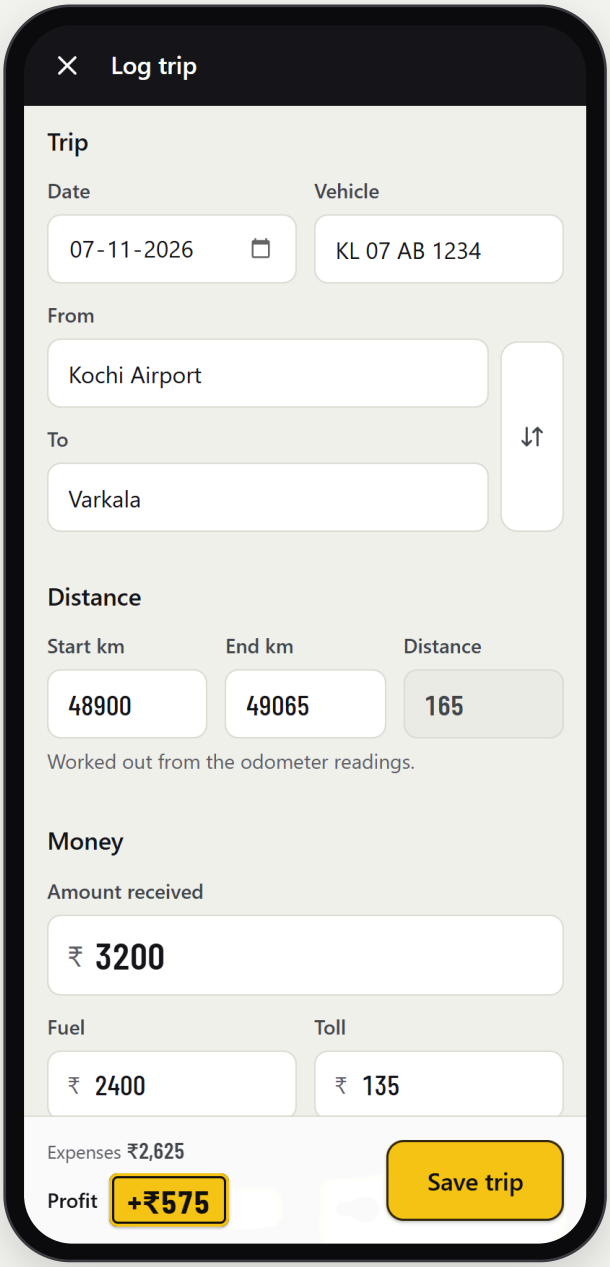

D Net and partners

From trip profit to the business's real result.

- Trip profit, minus expenses paid by partners, equals net
- Each partner's capital and expenses paid
- **Details** opens the full partner records

05 Logging a trip

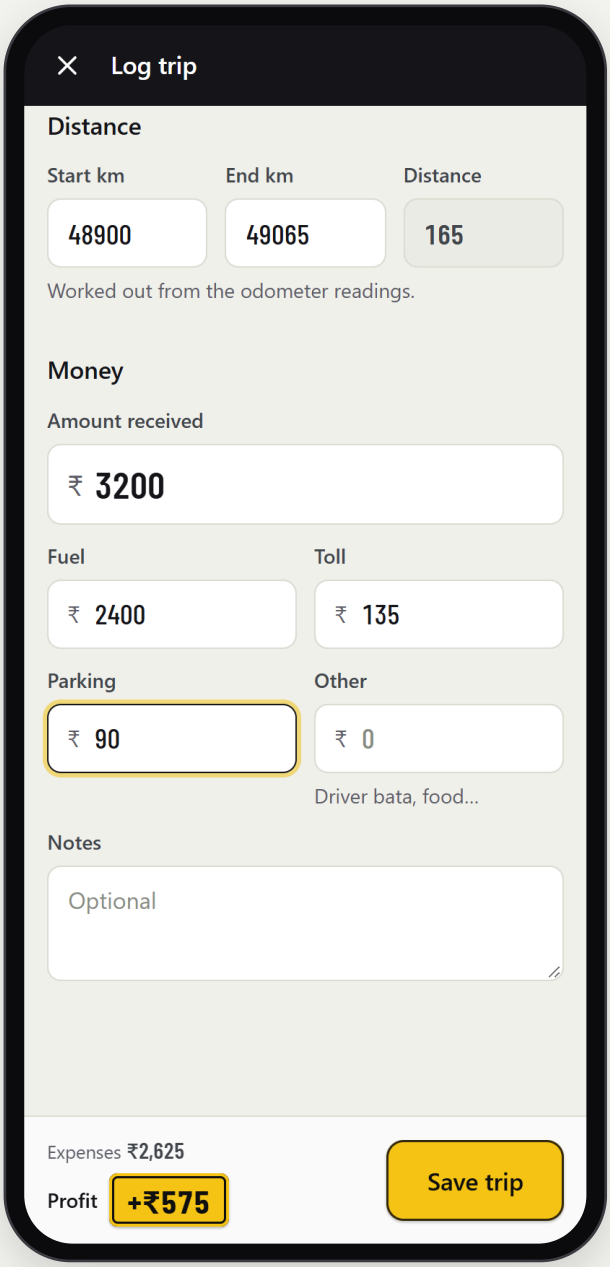

One screen, built for typing with one hand. The result updates as each amount is entered, before the trip is saved.

E Route and vehicle

Today's date and the usual vehicle are filled in already.

- Places typed before are suggested
- Swap button flips a return trip
- The app asks for From and To if they are missing

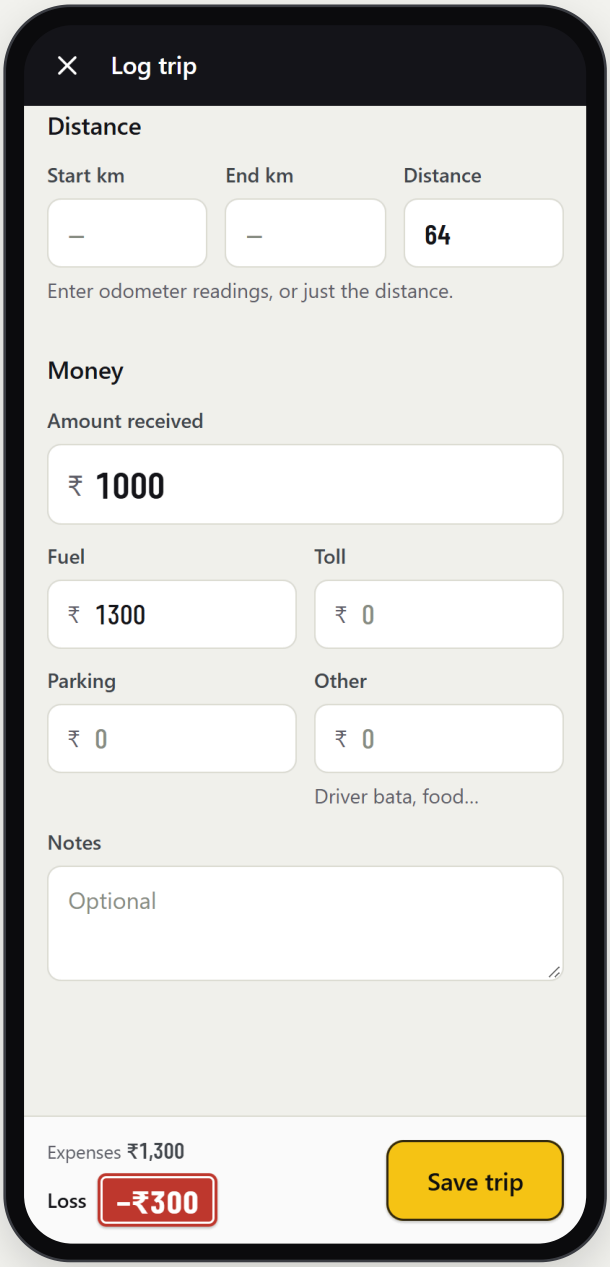

F Kilometres and money

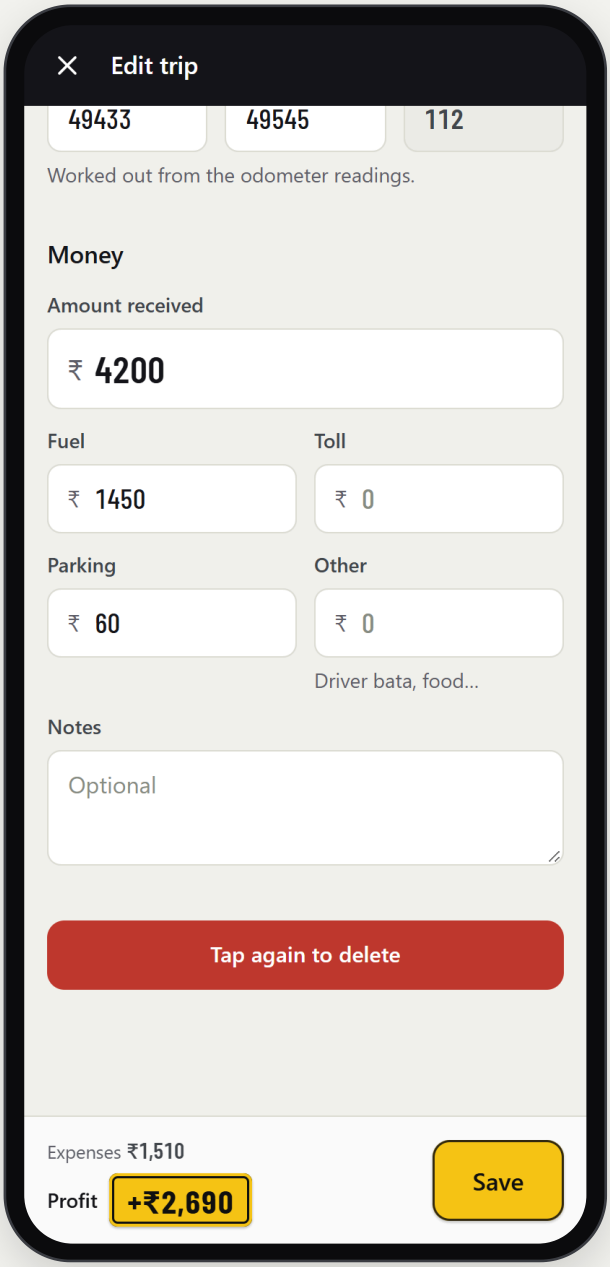

Odometer readings give the distance, or type the km directly.

- Number keypad for every amount, with ₹ shown
- Bottom bar shows expenses and profit live
- Warns if the end reading is below the start

06 Losses and corrections

Not every trip pays. Covenant makes a losing trip impossible to miss, and any entry can be corrected later.

G A trip that lost money

When costs are more than the fare, the plate turns red and reads **Loss**.

- Shown before saving, so a wrong figure is easy to spot
- Losses are taken off the day's and month's totals
- Loss days are red on the month chart

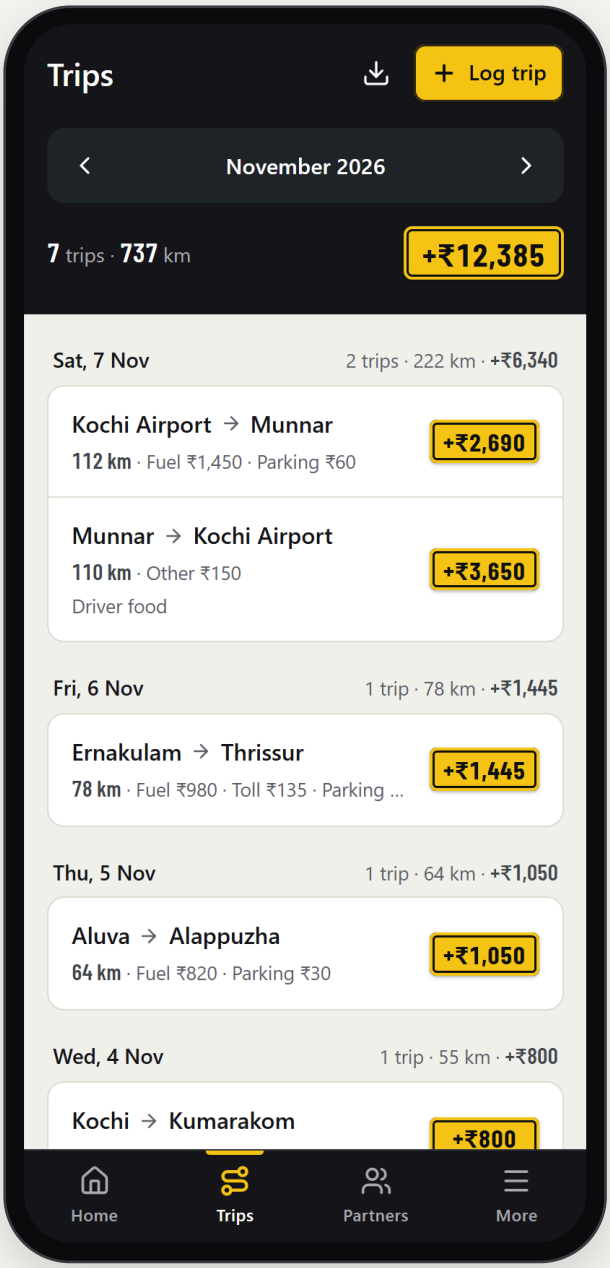

H Editing a trip

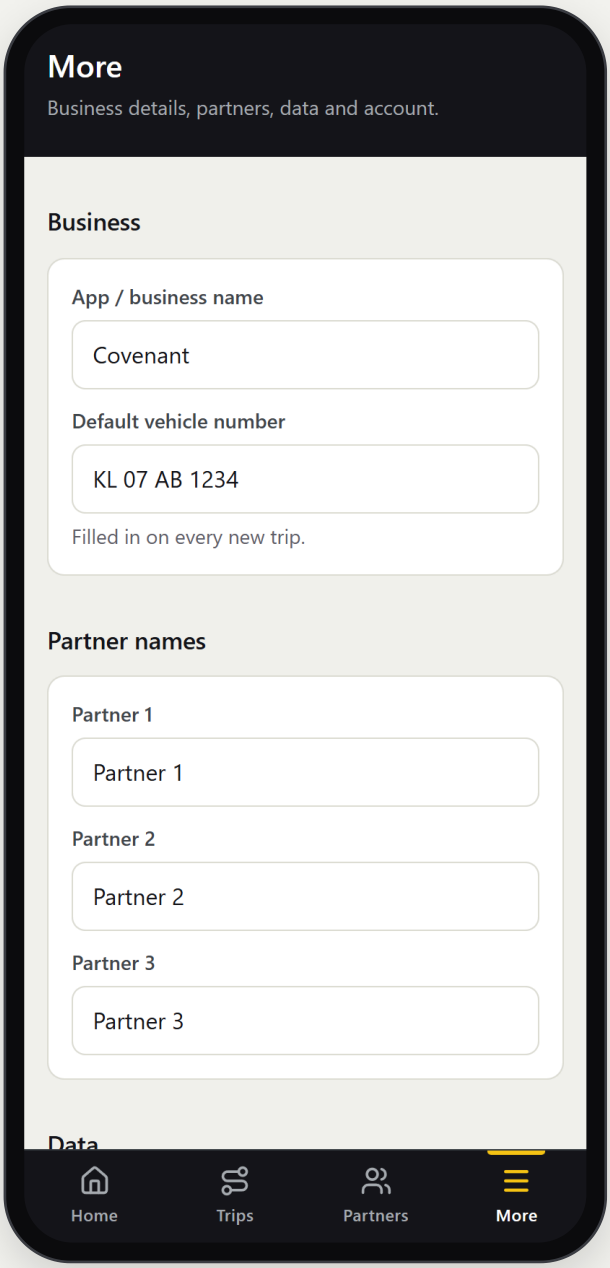

Tap any trip to open it with everything filled in, change it and save.

- Totals update everywhere as soon as it is saved
- Delete asks for a second tap: “Tap again to delete”
- The same works for capital and expense entries

07 Trip history and settings

Every trip ever logged, month by month, and the business details the app uses.

I All trips

Trips grouped by day, newest first, with each day's totals.

- Move between months with the arrows
- Month total: trips, km and profit
- Download button saves the month as a spreadsheet

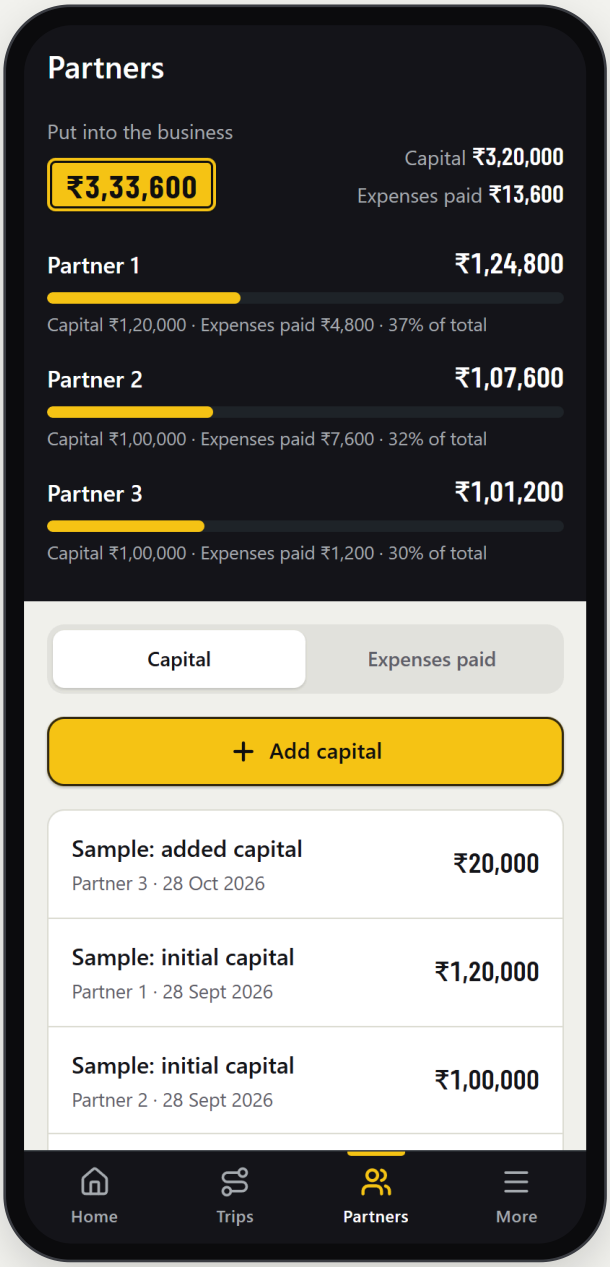

J More

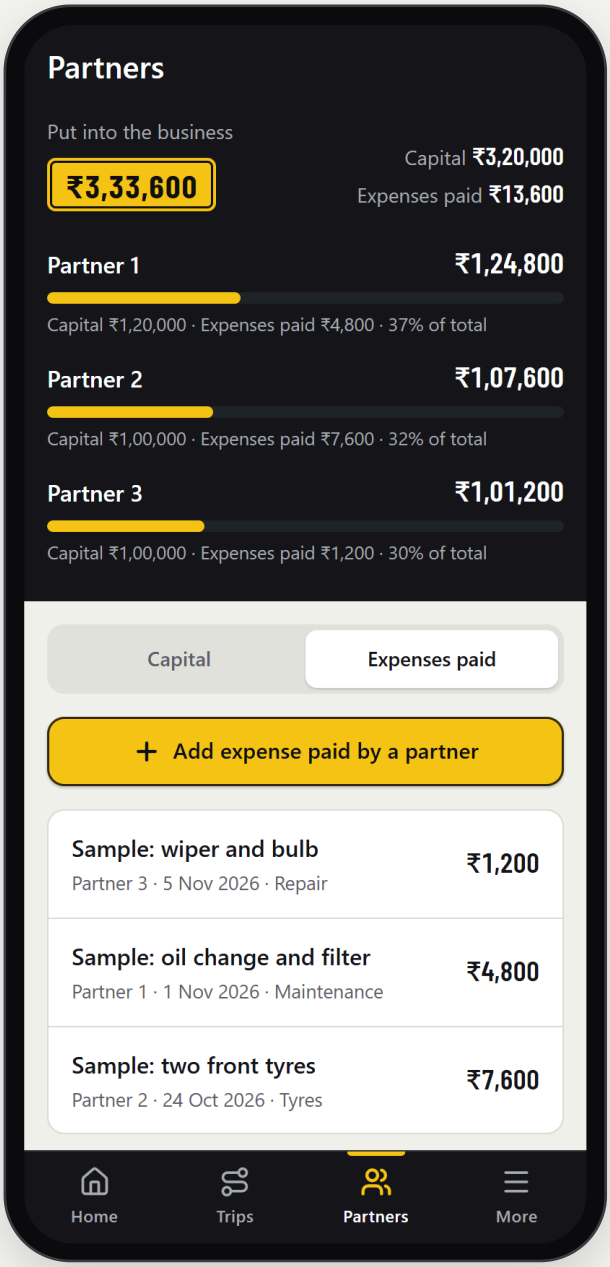

The business details, kept in one place.

- Business name, default vehicle number
- Partners' names, shown everywhere in the app
- Download all trips, clear sample data, sign out

08 Partners

Every rupee a partner puts in is recorded against their name, whether it is capital or an expense they paid for the business.

K Capital

The total put into the business, split by partner.

- Each partner's total and their share as a bar
- Capital and expenses paid shown side by side
- Every capital entry listed with its date

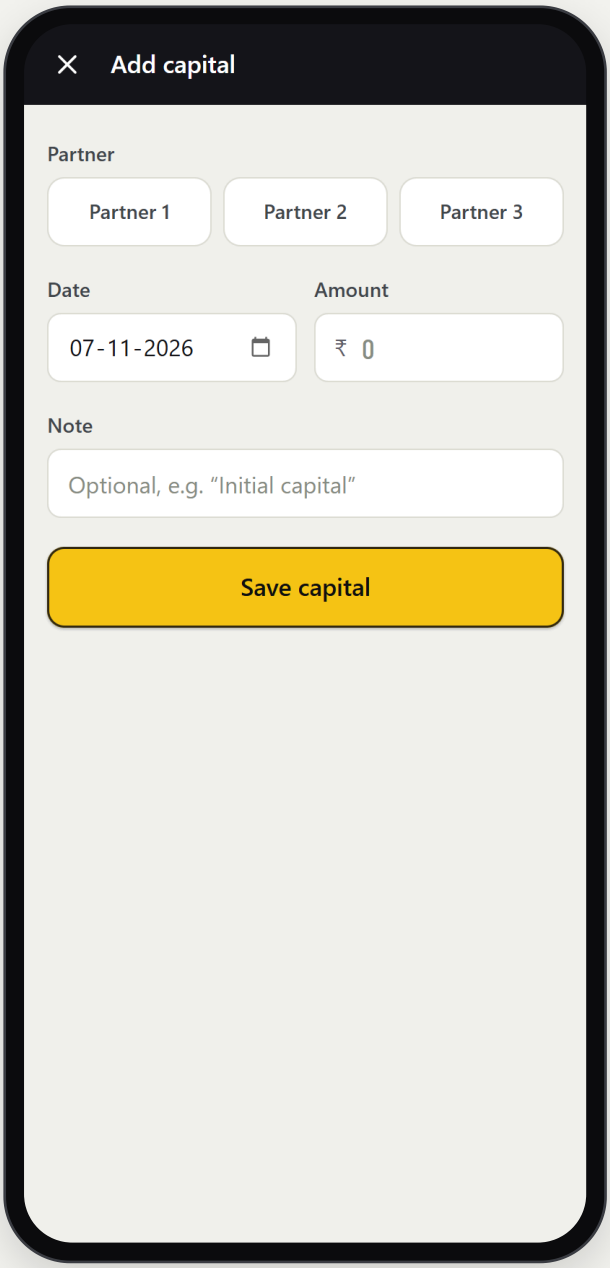

L Expenses paid

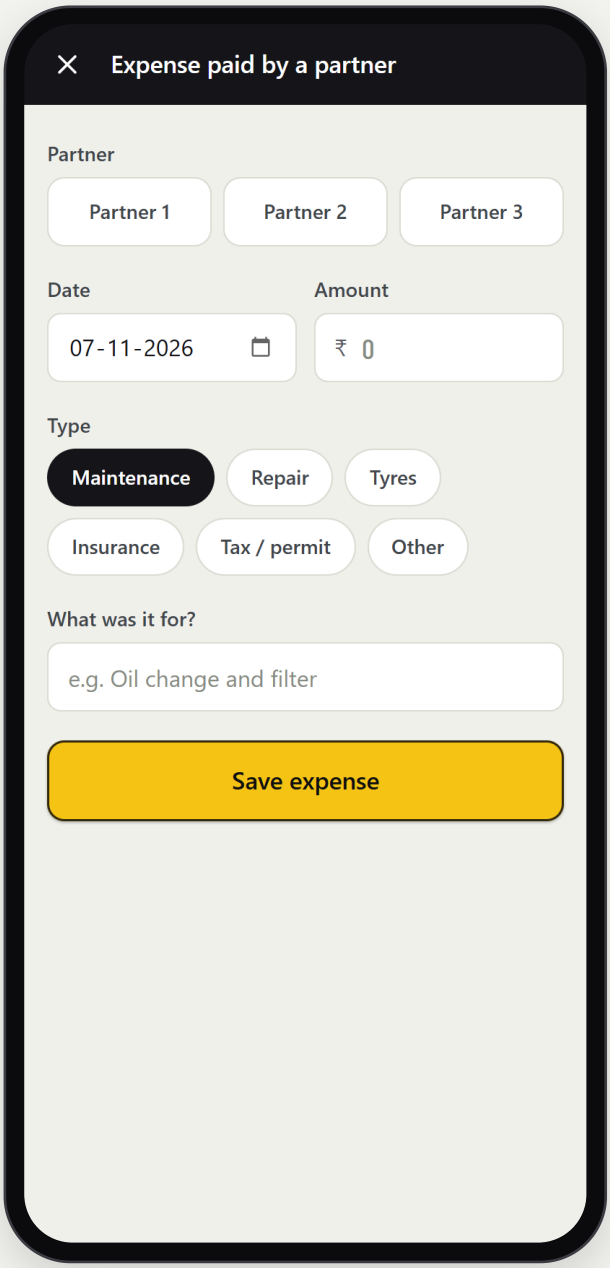

Costs a partner paid from their own pocket.

- Maintenance, repairs, tyres, insurance, tax and permits
- Date, amount and what it was for
- Tap any entry to correct it

09 Adding partner money

Two short forms. Pick the partner, enter the date and amount, and save.

M Add capital

For money a partner puts into the business.

- Partner picked with one tap
- Date, amount and an optional note
- Partners can add capital as often as needed

N Add an expense a partner paid

For business costs paid from a partner's own money.

- Category picked with one tap
- Description is required, so every rupee is explained
- Taken off the business's net for that day

10 Under the hood

The technical side, in plain words.

Any phone, no store

Covenant is a web app. It runs in the phone's browser on Android and iPhone, and can be added to the home screen with its own icon. Updates reach every phone automatically.

Private to the partners

Once the online database is connected, nobody can read or change the figures without signing in as one of the partners.

Your data, in a spreadsheet

Trips download as a CSV file that opens in Excel or Google Sheets, one month or all at once, with every cost column and the profit.

Easy to read outdoors

High-contrast colours, large text for amounts and big touch targets. Animations are switched off on phones set to reduce motion.

What is ready today

Feature	Prototype today	With the database
Log, edit and delete trips	✓	✓
Profit and loss per trip, day, month, all time	✓	✓
Profit-by-day chart	✓	✓
Partner capital and expenses paid	✓	✓
Spreadsheet download	✓	✓
Add to home screen	✓	✓
Same figures on all three partners' phones	next step	✓
Personal login for each partner	demo login	✓
Records kept safe if a phone is lost	next step	✓

11 Next steps

All the screens in this brochure work today. The app is not yet connected to an online database, so for now each phone keeps its own records. Four steps take it to daily use.

1 **Connect the online database**

Every trip and entry is then saved online. All three partners see the same figures on their own phones, and nothing is lost if a phone is changed.

2 **Create the partner logins**

One email and password for each partner. Nobody outside the three partners can see the business figures.

3 **Replace the sample data**

Enter the partners' real names and the vehicle number, clear the sample trips, and enter the capital each partner has already put in.

4 **Put it on the partners' phones**

Open the app's web address on each phone and add it to the home screen. It then opens like any other app.

One decision for the partners

When a partner pays for maintenance out of their own pocket, should it be **paid back to them** later from the business, or **counted as extra capital** they have put in?

Right now the app counts it towards that partner's total and takes it off the business's net profit. This is easy to change once the partners decide.
